

**Ohio Department of Medicaid Potentially Preventable Readmissions Hospital Report Card**

Terms:

"Initial Admissions" is the number of admissions for Medicaid patients in the dataset for the year that began a readmission chain. Note that the following types of patients are not counted as Initial Admissions: newborns, delivery cases, transplants, malignancies, HIV, major trauma, left against medical advice and selected other cases not considered by the 3M software.

"Only Admissions" is the number of admissions for Medicaid patients in the dataset for the year where there was no subsequent readmission. The same types of patients removed above in Initial Admissions are also removed in the Only Admissions category.

"Actual PPR Rate" is the Potentially Preventable Readmission rate, computed as *Total Clinically Related Readmission Chains* divided by *[Initial Admissions + Only Admissions]*.

A clinically related readmission chain is a series of admissions for the same patient in a year where the readmission(s) are clinically related. For example, if a patient had an admission then a readmission within 30 days of discharge from the first admission, this counts as one readmission chain. A test is then run to determine if the two cases in the chain are clinically related.

"Expected PPR Rate" is also Clinically Related Readmission Chains divided by Initial Admissions. The Expected PPR Rate differs from the Actual PPR Rate, however, in the number of Clinically Related Readmissions Chains used in the numerator. In the Expected PPR Rate computation, the actual Total Clinically Related Readmission Chains are converted into expected Total Clinically Related Readmission Chains by factoring in for each hospital its mix of adult and pediatric cases by DRG when compared to the statewide mix. It also considers patients with a mental health comorbidity when compared to the statewide mix.

The "Actual-to-Expected Ratio", therefore, is the Actual PPR Rate divided by the Expected PPR Rate.

If a hospital's Actual-to-Expected Ratio is = 1.0, this means the hospital had readmissions within 30 days at a rate that is expected given their patient mix.

If a hospital's Actual-to-Expected Ratio is less than 1.0, this means the hospital had less readmissions within 30 days than is expected given their patient mix.

If a hospital's Actual-to-Expected Ratio is greater than 1.0, this means the hospital had more readmissions within 30 days than is expected given their patient mix.

Hospitals shown on this report card are hospitals in Ohio that are paid by Ohio Dept of Medicaid through its APR-DRG system. Hospital mergers are cited at the bottom of the report card.

Hospitals highlighted in gray had less than 20 countable Medicaid Initial Admissions in the year, so their statistics are not valid for public reporting.

Hospitals highlighted in orange are new so there is more information yet to report. Hospitals highlighted in yellow have closed.
